SYMPTOTRACK

Healthcare Platform

Product Requirements Document (PRD)

Version 1.0 | February 2026

ABDM Compliant | DPDP Ready | India RMP Platform

Document Owner	SymptoTrack Product Team
Platform	Mobile (Android + iOS) + Web Admin
Target Market	India (ABDM Ecosystem)
Compliance	DPDP Act, NMC Guidelines, ABDM, FHIR R4
Last Updated	February 2026
Status	Ready for Development

1. Executive Summary

SymptoTrack is a full-stack healthcare platform built for the Indian medical ecosystem. It enables Registered Medical Practitioners (RMPs) to issue digital prescriptions, patients to view and manage their health records, and all stakeholders to operate within a compliant, secure, and intelligent system.

The platform addresses a critical gap in Indian primary healthcare: the disconnect between doctor prescriptions, patient adherence, lab reports, and follow-up compliance. SymptoTrack bridges this gap through smart automation, AI assistance, and ABDM-compliant data architecture.

1.1 Core Value Proposition

Stakeholder	Problem Solved	Key Benefit
Doctor (RMP)	Manual prescriptions, no patient follow-up visibility	Digital prescriptions + AI assistant + pre-visit summaries
Patient	Lost prescriptions, missed medicines, forgotten follow-ups	Auto reminders + health timeline + lab report linking
Healthcare System	Fragmented records, no ABDM integration	FHIR R4 mapping + ABHA linking + full audit trail

1.2 Competitive Advantage

SymptoTrack combines features from Practo, MFine, and Curefy into one unified, ABDM-compliant platform with capabilities that no single competitor currently offers:

- Auto-generated reminders directly from prescription data (no manual setup)
- Lab reports linked to specific prescriptions and test orders
- Doctor AI assistant with full audit trail and PHI protection
- Pre-visit patient summary auto-loaded for doctor before consultation
- DPDP-compliant consent management with patient-controlled access

2. Module 1 — Digital Prescription Engine

The core of the platform. Doctor writes prescriptions with AI assistance. Patient receives a clean, formatted digital prescription instantly upon doctor approval.

2.1 Doctor Side — Prescription Writing

2.1.1 Input Methods

- Free-text typing in clinical notes field
- Voice input with speech-to-text transcription
- Quick-select from doctor's personal medicine favorites list
- Template-based entry for common diagnoses

2.1.2 Prescription Fields

Field	Type	Required	Notes
Patient Name	Auto-filled	Yes	From connected patient profile
Date	Auto-filled	Yes	System timestamp
Diagnosis	Free text	Yes	AI structures into ICD-10 code
Medicines	Structured entry	Yes	Name, dose, frequency, duration, instructions
Tests Ordered	Free text / select	No	Linked to reminder system
Follow-up Date	Date picker	No	AI suggests based on diagnosis
Doctor Notes	Free text	No	Private clinical notes
Patient Instructions	Free text	No	Shown to patient in simple language

2.1.3 Doctor Approval & Signing

- Doctor reviews complete prescription before sending
- Digital signature applied via PIN-protected signature panel
- Prescription locked after signing — cannot be edited
- Sent to patient login instantly upon signing
- Prescription PDF generated with clinic letterhead and doctor signature

2.2 Patient Side — Prescription Viewing

2.2.1 Prescription Card Display

- Doctor name, qualification, registration number, clinic details
- Date and prescription ID
- Diagnosis shown in patient-friendly language (doctor toggles this option)
- Medicine list: name, dose, timing, duration, special instructions
- Tests ordered with due date
- Follow-up date highlighted prominently
- Doctor's instructions for patient

2.2.2 Prescription Management

- All prescriptions stored in My Prescriptions tab
- Search by doctor name, medicine name, diagnosis, or date
- Download as PDF or share via secure link
- Active vs past prescriptions clearly separated
- Prescription marked active until follow-up date passes

2.3 Compliance

- Every prescription carries: doctor registration number, timestamp, patient ABHA ID if linked
- FHIR R4 India profile mapping applied to all prescription data (Prompt 12)
- Prescription retained for minimum 7 years per Indian medical records law
- Immutable after doctor signature — no edits, amendments create new version

3. Module 2 — Smart Reminder System

All reminders are auto-generated from prescription data. Patient sets up nothing manually. Reminders run for the exact duration prescribed and auto-stop on completion.

3.1 Three Reminder Types

3.1.1 Medicine Reminders

Attribute	Detail
Trigger	Auto-created when prescription is signed and sent
Data Source	Medicine name, dose, frequency, duration from prescription JSON
Lock Screen Display	Time to take your medicine (no medicine name — privacy)
In-App Display	Take [Medicine Name] [Dose] [Instruction e.g. with food]
Duration	Runs for exact days prescribed — auto-stops on completion
Snooze	15 minutes maximum snooze — cannot be disabled mid-course
Multi-medicine	Each medicine gets its own reminder at correct timing

3.1.2 Follow-Up Reminders

When Sent	Message
7 days before	Your follow-up with Dr. [Name] is in 7 days on [Date]. Tap to confirm.
1 day before	Reminder: Doctor visit tomorrow with Dr. [Name] at [Clinic].
Morning of visit	Your appointment is TODAY. Don't forget to carry your reports.

3.1.3 Test/Investigation Reminders

When Sent	Message
3 days before follow-up	Dr. [Name] advised [Test Names] before your visit on [Date]. Get tested today.
1 day before follow-up	Tests pending before tomorrow's visit: [Test Names]. Upload reports after testing.

3.2 Reminder Dashboard (Patient)

- Single screen showing all active reminders from all prescriptions
- Color coded: Green = Medicine, Blue = Follow-up, Yellow = Tests

- Upcoming and completed reminders separated
- Missed reminders show red badge on app icon

3.3 Smart Logic

- Critical medicines (insulin, heart medicines) — gentle vibrate only during quiet hours, no sound
- Regular reminders respect patient-set quiet hours (default 10 PM - 7 AM)
- Doctor can add custom reminder notes during prescription writing
- Reminder auto-adjusts if prescription is updated or extended

4. Module 3 — Lab Report Linking

Lab reports are linked to the specific prescription and test order that requested them. Doctor sees a pre-visit summary of ordered vs uploaded reports before the patient arrives.

4.1 Report Upload Methods

4.1.1 Patient Manual Upload

- Patient receives physical/digital report from lab
- Opens app: Upload Report section
- Photo capture or PDF upload supported
- App prompts: Which doctor visit is this for? Patient selects prescription
- Report auto-linked to that prescription and test order
- Doctor notified instantly: Patient has uploaded [Test Name] report

4.1.2 Lab Direct Upload (Premium Feature)

- Partner labs receive lab-side login credentials
- Lab uploads report against patient ABHA ID or registered mobile number
- Report appears in patient login automatically — no patient action needed
- Patient notified: Your [Test Name] report from [Lab Name] is ready

4.1.3 ABDM / DigiLocker Pull

- Patients with ABHA ID linked can pull existing health records
- One-tap import from ABDM Health Locker
- Explicit consent screen before any data pull (Prompt 11 + 13)
- FHIR R4 format maintained for all imported records

4.2 Report Views

4.2.1 Patient View — My Reports Tab

Report Card Shows	Detail
Test name + date	e.g. CBC — 12 Jan 2025
Ordering doctor	Dr. Sharma — General Physician
Linked prescription	Prescription #P-1234 — 1 Jan 2025
Upload status	Uploaded or Pending
Actions	View, Download, Share

4.2.2 Doctor View — Pre-Visit Summary

- Auto-loaded before scheduled follow-up — doctor sees before patient arrives
- Last prescription with all ordered tests listed
- Each test shows: Ordered / Uploaded / Missing status
- Doctor can open and review uploaded reports directly
- Doctor can send nudge to patient if report missing: Please upload your CBC report
- View only — doctor cannot edit reports

4.3 Smart Linking Logic

- Every report linked to: patient, prescription, doctor, test order, follow-up date
- Creates complete health timeline across all visits
- Future visits show: Last HbA1c was 7.2 — done 3 months ago

4.4 Privacy & Access

- Reports visible only to patient + ordering doctor
- No other doctor sees reports without fresh patient consent
- Patient can revoke doctor report access anytime
- Emergency access (Break-the-Glass) separately logged — Prompt 7

5. Module 4 — Patient Health Timeline & Profile

A complete chronological health story for every patient. All prescriptions, reports, reminders, and visits in one view. Separate depth levels for patient and doctor.

5.1 Patient View — My Health Journey

5.1.1 Timeline Card Structure

Element	Content
Header	Date — Doctor Name (Speciality)
Diagnosis	Patient-friendly diagnosis name
Medicines	Count of medicines prescribed
Tests	Ordered tests with uploaded/pending status
Reports	Count of linked reports
Reminders	Completion status
Follow-up	Date and visit status (Visited / Upcoming / Missed)
Card Color	Green = Complete, Yellow = Upcoming, Red = Missed

5.1.2 Patient Profile Card

- Name, Age, Blood Group, ABHA ID
- Known allergies — doctor fills on first visit
- Chronic conditions — auto-populated from prescription history
- Current active medicines across all prescriptions
- Emergency contact number

5.1.3 Health Summary Stats

- Total visits this year
- Currently active medicines
- Pending tests and reports
- Upcoming follow-up dates

5.2 Doctor View — Patient Chart

5.2.1 Pre-Consultation View

- Last 3 visits auto-loaded on patient chart open
- Current active medicines from ALL doctors (cross-doctor visibility)

- Latest uploaded reports with values if structured
- Allergies and chronic conditions flagged at top — always visible
- Missed follow-ups highlighted in red with count

5.2.2 Trend View (Premium Feature)

- Repeated tests shown as value graph over time
- Works for: HbA1c, BP, Blood Sugar, Cholesterol, Weight, Hemoglobin
- Doctor sees trend direction: Improving / Stable / Worsening
- Values sourced from uploaded structured lab reports

5.3 Access Control & Sharing

- Patient sees list of all doctors with access to their timeline
- Grant or revoke access per doctor with one tap
- New doctor requires fresh consent before seeing history
- Export full health summary as PDF
- Share with new doctor via QR code — 24-hour temporary access link
- Caregiver access: limited view for family member or nominated person

6. Module 5 — Doctor AI Assistant

AI side panel visible only to doctor during prescription writing. Suggests, flags, and references — never decides. Doctor is always in full control. All AI activity fully audited.

6.1 UI Placement

- Slide-in panel on right side of prescription screen
- Doctor can collapse or expand at any time
- Does not interfere with prescription writing area
- Chat-style interface for free questions
- Persistent label: AI Assistant — Suggestive Only. Requires doctor verification.

6.2 AI Features

Feature	What It Does	Doctor Action
Drug Interaction Flag	Flags commonly risky medicine combinations in real time	Dismiss / Note on Prescription
Dosage Reference	Shows usual adult dose range when medicine is typed	Acknowledge / Ignore
Diagnosis Guidance	Shows standard first-line drug classes per Indian guidelines	View / Collapse
Follow-up Suggester	Suggests follow-up duration based on diagnosis	Use Suggestion / Set Manually
Test Suggestion	Recommends commonly ordered tests; checks if recently done	Add to Prescription / Dismiss
Free Chat	Doctor types any clinical question; AI responds with references	Use / Ignore response

6.3 AI Boundaries — What AI Will Never Do

- Never auto-fill any part of the prescription
- Never suggest specific brand name medicines — drug classes only
- Never provide a diagnosis
- Never override or modify doctor decisions
- Never show any AI content to the patient
- Never access patient data without doctor actively opening that patient chart
- Never send patient PHI to AI model — only clinical terms (diagnosis, medicine names)

6.4 AI Audit Trail (Prompt 10)

- Every AI suggestion generated is logged with timestamp and session ID
- Every doctor action on each suggestion logged: Used / Dismissed / Noted
- AI failures and fallbacks logged separately
- Full AI lineage exportable for regulatory review
- No patient identifying data in AI logs — clinical terms only

7. Module 6 — Login & Onboarding

Two completely separate login journeys. Doctor is verified as licensed RMP before prescribing anything. Patient registers simply. Both ABDM compliant with ABHA linking.

7.1 Doctor Onboarding (5 Steps)

Step	Action	Gate
1 — Basic Registration	Mobile OTP, name, email, clinic, speciality	OTP verified
2 — RMP Verification	Medical Reg Number + Council — verified vs NMC/State database	Cannot prescribe until verified
3 — Clinic Setup	Clinic name, address, logo, timing, HFR optional	Unlocked after Step 2
4 — Digital Signature	Draw or upload signature, PIN protected	Required before first prescription
5 — ABHA Linking	Optional — link personal ABHA ID	Can skip, link later

7.2 Patient Onboarding (5 Steps)

Step	Action	Required
1 — Registration	Mobile OTP, name, date of birth, gender	Yes
2 — Health Profile	Blood group, allergies, chronic conditions	Optional but encouraged
3 — ABHA Linking	Create new / Link existing / Skip	Optional
4 — Notification Setup	Grant permissions with clear explanation of purpose	Required for reminders
5 — Connect to Doctor	QR code scan / 6-digit code / Search by name	Required to receive prescriptions

7.3 Security Architecture

Security Feature	Doctor	Patient
Login Method	OTP only (no passwords)	OTP + Biometric option
Session Timeout	10 minutes inactivity	30 minutes inactivity
Device Tracking	New device alert sent	New device alert sent
Biometric Login	Supported for returning users	Supported for returning users
Failed OTP Limit	5 attempts then 30min lockout	5 attempts then 30min lockout

7.4 Role-Based Access Control (RBAC — Prompt 17)

Feature	Patient	Doctor	Admin
Write Prescription	No	Yes	No
View Own Prescriptions	Yes	No	No
View Patient Records	No	Own patients only	Audit metadata only
Upload Lab Reports	Yes	No	No
View Lab Reports	Own only	Own patients only	No
AI Assistant Access	No	Yes	No
Manage Reminders	Yes (own)	No	No
View Audit Logs	No	No	Yes

8. Module 7 — Notifications & Communication

Smart multi-channel delivery: Push first, SMS fallback, WhatsApp last resort. Doctor and patient communicate inside the app — personal numbers never shared.

8.1 Notification Delivery Architecture

Channel	Priority	Use Case	Cost
Push Notification	1st — Primary	All notifications when app installed + notifications on	Free
SMS	2nd — Fallback	Phone offline, notifications denied, critical reminders	Per SMS cost
WhatsApp	3rd — Last Resort	SMS failure, highest open rate in India	Per message cost

8.2 Notification Categories

Type	Channels Used	Quiet Hours Respected
Medicine Reminder (regular)	Push -> SMS -> WhatsApp	Yes — held until 7 AM
Medicine Reminder (critical)	Push -> SMS -> WhatsApp	Partial — silent vibrate only
Follow-up Reminder	Push -> SMS	Yes
Test Reminder	Push -> SMS	Yes
Doctor Message	Push only	Yes
Report Uploaded Alert	Push only	Yes
Security Alert (new device)	Push + SMS simultaneously	No — always immediate
Consent Expiry Alert	Push -> SMS	Yes

8.3 In-App Messaging

8.3.1 Doctor Can Send

- Prescription follow-up message (AI-drafted, doctor approves before sending — Prompt 5)
- Report request message
- Follow-up confirmation with date and clinic details
- Custom clinical message (free text, clinical topics only)

8.3.2 Patient Can Send

- Reply to doctor messages
- Pre-defined requests: Request Prescription Copy, Ask About Medicine, Report an Issue, Request Earlier Appointment
- Patient cannot send unprompted free-text messages to doctor

8.4 Notification Settings

Setting	Patient Control	Doctor Control
Medicine Reminders	On/Off per prescription	N/A
Follow-up Reminders	On/Off	N/A
Test Reminders	On/Off	N/A
Doctor Messages	On/Off	N/A
Patient Message Alerts	N/A	On/Off
Report Upload Alerts	On/Off	On/Off
Quiet Hours	Set custom hours	Set consultation hours
Preferred Channel	Push / SMS / WhatsApp	Push only

9. Module 8 — Admin Panel & Compliance Dashboard

Web-based backend control center for your internal team only. Manages doctor verifications, compliance audits, DPDP erasure requests, security operations, and regulatory reporting.

9.1 Admin Roles

Role	Access Scope	Cannot Access
Super Admin	Full access — all sections + create other admins	Prescription content (hard restriction)
Verification Admin	Doctor verification queue only	Patient data, health records, prescriptions
Compliance Admin	Audit logs, consent records, erasure requests	Prescription content, lab reports
Support Admin	Account metadata, notification logs, app versions	All health records, messages

9.2 Doctor Verification Queue

- Auto-verified when NMC/State Council API confirms registration
- Falls to manual queue when API unavailable — admin cross-checks council website
- Approve: doctor gets instant notification + full access
- Reject: admin must enter reason + doctor gets reason + appeal option
- Unverified doctors: read-only access, cannot prescribe (hard block)

9.3 Compliance Center

9.3.1 Consent Audit Log (Prompt 6)

- Every consent event logged: Patient, Doctor, Action, Purpose, Duration, Timestamp, Device
- Immutable — cannot be edited or deleted
- Filterable and exportable as CSV for regulatory audit

9.3.2 Emergency Access Log — Break-the-Glass (Prompt 7)

- Every emergency access flagged with justification text
- Post-event review mandatory within 48 hours
- Overdue reviews highlighted red
- Patient auto-notified after emergency access once stable

9.3.3 Data Erasure Requests (DPDP — Prompt 20)

- 30-day processing deadline tracked per request
- System shows exactly what data will be erased vs legally retained
- Prescriptions retained 7 years per Indian medical law — not erasable
- Confirmation report generated and sent to patient after processing

9.3.4 AI Audit Trail (Prompt 10)

- Total AI suggestions generated vs doctor actions: Used / Dismissed / Noted
- All AI failures and fallbacks logged
- Exportable for NMC or regulatory review
- No patient PHI in AI logs — clinical terms only

9.4 One-Click Regulatory Reports

Report	Content	Format
Monthly Active Doctor Report	Verified doctors, prescription volumes	PDF / CSV
Consent Audit Report	All consent events, grant/revoke history	PDF / CSV
Data Erasure Compliance Report	Requests processed, pending, timelines	PDF
Emergency Access Report	All break-the-glass events and review status	PDF
AI Usage & Safety Report	Suggestions, actions, failures	PDF / CSV
Security Incidents Report	Failed logins, suspicious activity, account actions	PDF

10. Non-Functional Requirements

10.1 Performance

Metric	Target
App launch time	Under 2 seconds
Prescription delivery to patient	Under 5 seconds after doctor signs
Reminder delivery (push)	Under 30 seconds of scheduled time
AI assistant response	Under 3 seconds
Report upload	Under 10 seconds for PDF up to 5MB
API uptime	99.5% minimum

10.2 Security

- All data encrypted in transit (TLS 1.3) and at rest (AES-256)
- No patient PHI sent to external AI models — clinical terms only
- Session tokens expire — no persistent login tokens stored on device
- All API endpoints require authenticated tokens
- Penetration testing before go-live

10.3 Compliance Summary

Regulation	Requirement	How Met
DPDP Act 2023	Explicit consent, erasure rights, audit trail	Prompts 6, 7, 20 + consent flows
ABDM	ABHA linking, FHIR R4, consent artefacts	Prompts 11, 12, 13
NMC Telemedicine	RMP verification, AI disclosure, doctor control	Prompt 15, AI labeling, Module 5
HFR	Facility verification	Prompt 14
Indian Medical Records Law	7-year prescription retention	Data retention policy

11. Module Summary & Scope

Module	Name	Priority	Affects
1	Digital Prescription Engine	P0 — Core	Doctor + Patient
2	Smart Reminder System	P0 — Core	Patient
3	Lab Report Linking	P1 — High	Patient + Doctor
4	Patient Health Timeline	P1 — High	Patient + Doctor
5	Doctor AI Assistant	P1 — High	Doctor only
6	Login & Onboarding	P0 — Core	All roles
7	Notifications & Communication	P0 — Core	Patient + Doctor
8	Admin Panel & Compliance	P1 — High	Internal team

P0 = Must have for MVP launch. P1 = Required for full product. P2 = Future enhancement.

11.1 Out of Scope (Version 1.0)

- Telemedicine / Video consultation
- In-app pharmacy ordering
- Insurance claim processing
- Hospital management system (HMS) integration
- Multi-language UI (Hindi support planned for Version 1.1)
- Wearable device integration (Version 2.0)
